**The Fastest, Easiest and Risk-Free way to Multiply your ETH ~ infinitely!**

<https://ETHMatrix.network>

# Game Mechanics

There are 2 Matrices, you auto-join both when you enter the game.

The entry cost is 0.025 ETH for each ETHMatrix == Total Registration cost of 0.05 ETH

Below each Matrix you have a number of partners which pay you ETH direct into your wallet (P2P).

~ Each Matrix has 12 levels - each twice the price of the previous level, you buy into each level in sequence - with each one earning you double the money!

~ There are no timeouts or expiry on any level!

~ Each level also have auto-renewal systems built in!

~ Overflow payments and auto-referrals are baked right into ETHMatrix!

~ What's more - every single player will receive ETH Dividends! 2% of every payment is taxed as a dividend commission which is distributed to all players based on their total investment in the game! Providing a lifetime income for all!

## Game Mechanics - ETHMatrix x3

**ETHMatrix x3 - Level 1 price = 0.025**

ETHMatrix x3 has 12 levels, each level is twice the price of the previous. Each level has 3 Partners below you (And you are referred by another account):

For your first 2 partners below you - their payments into the ETHMatrix go directly into your wallet (Minus the Dividend commission of 2%).

The 3rd partner that comes under your account at each level auto reinvests for you! The payment comes to you but auto-pays for the level to be renewed by paying your upstream partner (At the same level).

This renewal process resets your current partners connection (User C & D)... at this point you should upgrade to the next level, if not the next round of payments at this level will be redirected to your upstream partner!

You will also receive these "upstream/overflow" payments from your downstream partners too when they renew (See payment flow from User H)!

~ There are no expiry dates on partners or levels!

## Game Mechanics - ETHMatrix x6

**ETHMatrix x6 - Level 1 price = 0.025**

ETHMatrix x6 has 12 levels like x3, each level is twice the price of the previous. But unlike x3 this system is 2 levels deep for your referred partners - giving 6 partners in total!

Your first 2 partners under x6 pay their payments (Minus the Dividend commission) direct to your current partner (User A).

The second level (Users E, F, G & H) are your payment level with Users E,F,G paying direct ETH direct into your wallet (Minus the dividend commission).

User H is the auto-reinvest payment - renewing the level for you... as with the x3 system this clears your referrals letting the system begin again but only if you upgrade to the next level ~ otherwise the next round of payments from your partners would go up your matrix to your partner!

Levels don't expire so filling your slots is not an issue!

## Game Mechanics - Game Levels

### ETHMatrix - Upgrading Levels

There are 12 levels in both ETHMatrix x3 & x6 - each level priced at twice the previous (level 1 = 0.025 ETH). You can only buy each level in sequence (And independently for each x3 and x4).

If you level up ahead of your partner then you will move ahead of them in the Matrix! Your link will temporarily move to another player (If your original partner does upgrade when you next renew they get the chance to regain you as a partner!).

There is also a RISK of you losing out on profit if you are not at the highest level of your partners when they level up ~ as you can only receive their payment if you match their level at the time, so it pays to always be ahead of your partners!

Upgrading through the levels also entitles you to receive multiple rounds of payments for the previous level!

## Game Mechanics - Dividends

### ETHMatrix - Dividends

What makes ETHMatrix unique from other matrix games is our lifetime dividends system!

From every matrix payment a tiny 2% dividend commission is charged ~ this is not a dev payment but paid to all players in the game!

It is distributed to everyone based on your total investment in the game ~ a totally fair distribution!

You continue to earn even if your matrix remains idle!
